Plural Component Spray Units**

# Ecoatech XP Custom EC6500V2 XP Custom EC10000V1 Plural Component Spray Units

The Ecoatech XP Custom EC6500V2 and XP Custom EC10000V1 Plural Component Spray units are EonCoat endorsed and designed with efficiency and overall application performance at the forefront. The benefit of the Ecoatech XP mechanical proportioner is that it offers technology that very closely resembles pneumatic contractor airless which is widely used in the corrosion coatings application environment.

Both easy to use and maintain, allowing for efficient and cost-effective applications time after time.

When used to apply the Eoncoat zero VOC, water-based corrosion coating, clean up and safety for the operator makes it a preferred and environmentally sustainable system. The Ecoatech units have undergone several beneficial changes for optimum efficiency as well as being designed to effectively apply all three of the EonCoat derivatives.

For optimum application, Ecoatech offer two application handpieces, Fusion SP and the MicroMix™ Manifold which, when coupled with a standard front entry gun, offers the perfect solution for tighter areas of application.

MicroMix™ Manifold and Gun

Fusion SP Gun
