

ECOATECH

DRIVING INNOVATION

**Ecoatech M2K Low Pressure Plural
Application System for EonCoat**

Ecoatech M2K Custom Low Pressure Spray Unit

True to Ecoatech's commitment to innovation in making the application of specialised coatings both safer and more productive, we have listened to our customers and made a complete solution with a highly manoeuvrable and compact 2K application platform.

Both easy to use and safer in terms of being able to get the proportioner closer to the work face, our Ecoatech Low pressure spray platform can be placed in areas of limited access such as decking and scaffolding, given the compact and lighter configuration.

Offering this solution has made the application of EonCoat to more complex geometries using our conventional or air assisted application technology both simpler and more cost effective whilst maximising transfer efficiency to structural steel and the likes thereof.

The key unit features are:

- Dimensions are 650mm x 900mm x 1260mm H
- Designed for low pressure air spray and air assisted airless Weight: approx 130kg
- 20L Stainless steel hoppers
- Built in flush pump
- 15m x ¼ inch hose bundle as standard
- 2x auxilliary air outputs for mixing either side

When used to apply the EonCoat zero VOC, water-based corrosion coating, clean up and safety for the operator makes it a preferred and environmentally sustainable system.

For optimum application, the Ecoatech MicroMix™ Manifold is offered as standard and may be used as a stand alone application handpiece or may be coupled with either a standard air spray or air assisted airless handpiece.
